

Digital Preservation of
Business Processes and Services
April 2011 - December 2014

Angela Dappert
DPC
angela@dpconline.org

Overview

TIMELESS BUSINESS   

- Project
- Goals
- Approach and methodology

Digital preservation for timeless business processes and services

- timbusproject.net/
- <http://opensourceprojects.eu>
- info@timbusproject.net
- https://twitter.com/timbus_project

- April 2011 - December 2014

- co-funded by the European Union
FP7/2007-2013
under grant agreement no. 269940

The TIMBUS Consortium

TIMELESS BUSINESS   

- SAP - Lead partner (NI, CH)
- Intel (Ireland)
- Software Quality Systems (Germany)

Industry

- Digital Preservation Coalition (UK)
- INESC - ID (Portugal)
- Karlsruhe Institute for Technology (Germany)
- Laboratório Nacional de Engenharia Civil (Portugal)
- Münster University (Germany)

Research

- Caixa Magica Software (Portugal)
- Secure Business Austria (Austria)

SMEs

A Preservation Continuum

TIMELESS BUSINESS 

Longevity

Digital Preservation

Business Continuity Management

Complexity

Motivation: Continuity

TIMELESS BUSINESS ◀ ○ ©

- Reusability of any part of the process:
 - Redeployment of the process
- Curation and continuous improvement
 - By explicitly exposing the methods used in the process
- Changes in technical environments
 - Manage transitions across platforms
- Staff changes
 - Knowledge retention and continuity
- Third-party services
 - Protect data and functionality

Motivation: Provenance

TIMELESS BUSINESS ◀ ○ ©

- **Improve understandability**
Explicit links between data, processes, platforms, results
- **Attribution and referencing**
Cite data, publications and processes using URIs/DOIs
Refer to registries
- **Prove of authenticity**
- **Repeatability / Reproducibility**
- **Traceability, error detection, diagnosis and prove of quality of process products**
Assess validity of data, processes, derived outputs
- **Regulated areas**
Audit, compliance, reproduce, diagnose, evidence for litigation

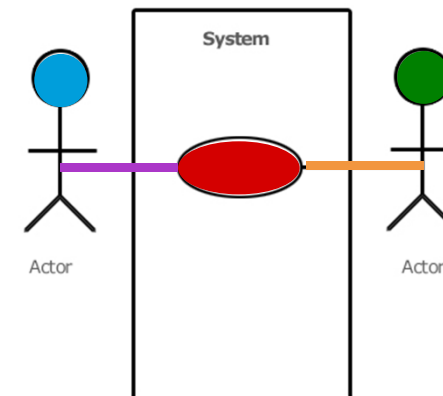

Use Cases

TIMELESS BUSINESS 

Preservation of

- Open source workflows
- Open source systems
- Civil engineering: Dams
- E-Health

Context Analysis

TIMELESS BUSINESS

Context Analysis - Preservability

TIMELESS BUSINESS ◀ © ▶

Quality	No.	Characteristics	Metrics	Expected Output
Compatibility	C1	Co-Existence		-
	C2	Interoperability		
Portability	P1	Adaptability		
	P2	Installability		
	P3	Replaceability		
Maintainability	M1	Modularity		
	M2	Reusability		
	M3	Analysability		
	M4	Modifiability		
	M5	Testability		
Security	S1	Confidentiality		

Based on ISO/IEC (2010) ISO/IEC 25010

Context Analysis - Preservability

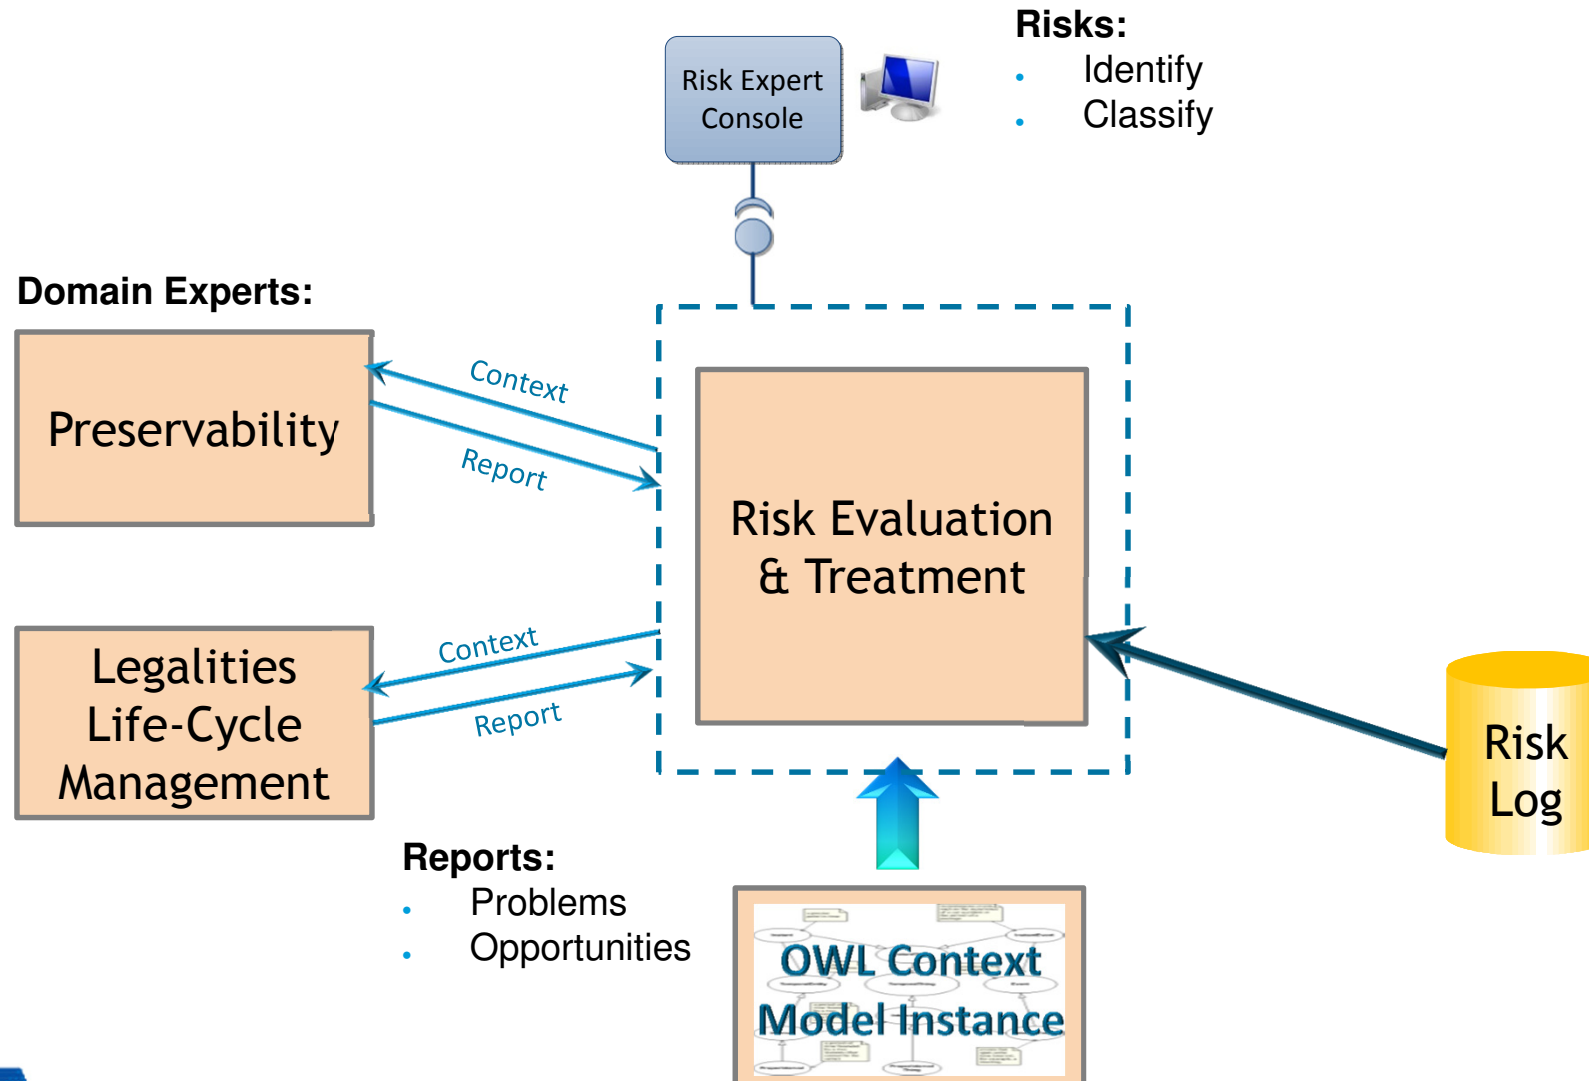

TIMELESS BUSINESS ◀ © ▶

Quality	No.	Characteristics	Metrics	Expected Output
Compatibility	C1	Co-Existence		-
	C2	Interoperability		
Portability	P1	Adaptability		
	P2	Installability		
	P3	Replaceability		
Maintainability	M1	Modularity		
	M1.1		The system's coupling is low and cohesion is high.	Coupling and cohesion metric values
	M2	Reusability		
	M2.1		The external interfaces of the system are clearly specified.	See C2.4.
	M2.2		The communication to and from the system is standardised.	See C2.2.
	M2.3		The system has a sufficient level of encapsulation.	See M1.
	M2.4		The licenses and legal regulations permit reuse.	License clauses
	M3	Analysability		
M4	Modifiability			
M5	Testability			
Security	S1	Confidentiality

Putting it Together

TIMELESS BUSINESS ◀ © ▶

Preserve -DPES

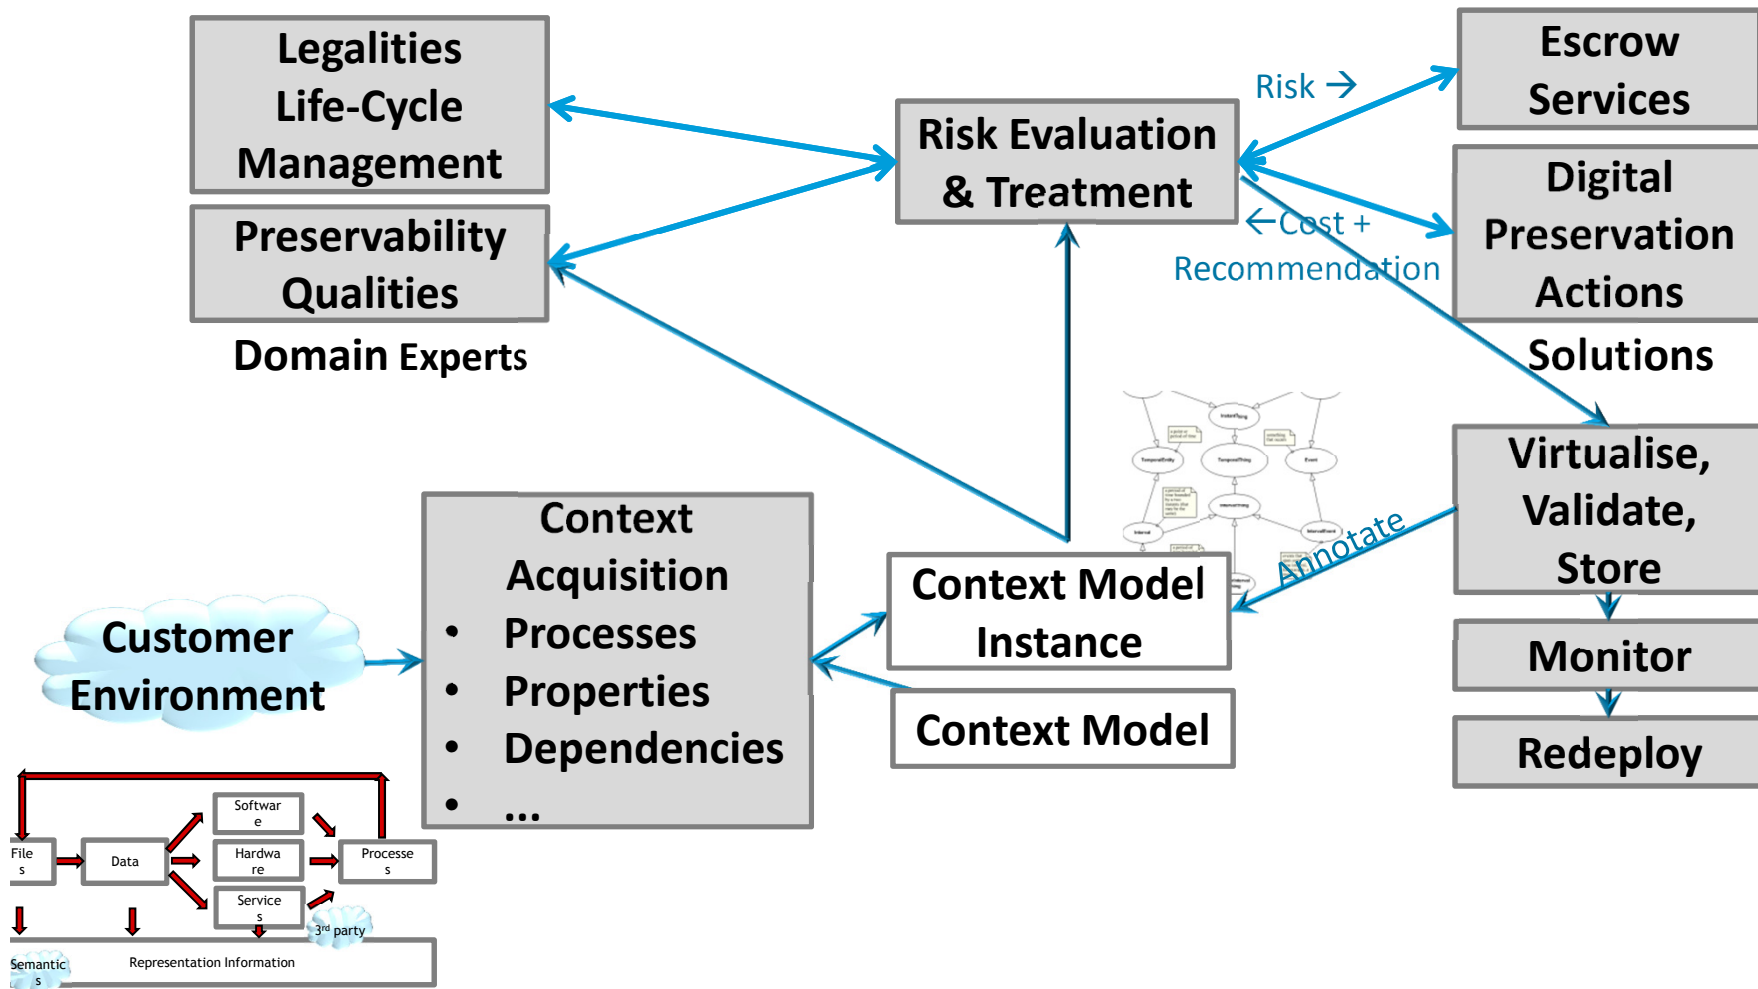

TIMELESS BUSINESS ◀ © ▶

- Determine artefacts to be preserved
 - Calculate cost of preservation based on all the required artefacts
 - Calculate projected cost for a given number of years
 - Recommend action
- Package artefacts
 - Create list of artefacts to acquire from the context model
 - Create checksums for all files
 - Extract system metadata for the files to store with the files
 - Create metadata for the overall project to store with the project
 - Annotate the context model with the newly created metadata
 - Specify significant properties, their known values, how to capture them
- Create a Virtual Machine
 - ... using the hardware configuration extracted during context acquisition
 - Verify the service
 - Store VM in backend storage
 - Update risk register with residual risks
